Is a cybersecurity strategy enough?

Unfortunately, as data breaches continue to occur, the answer is no, a cybersecurity strategy is only the first step in protecting the company's data. With the average corporate data breach costing **\$4 Million**¹ just having a strategy is not enough. What is needed is an independent assessment to determine if the strategy is effective. 227 InfoSec takes a comprehensive approach to cybersecurity and understands how important independent assessments are with protecting a company's data. 227 InfoSec performs the independent assessment of your enterprise and documents the assessment in a clear, concise report enabling you to prioritize your IT expenses.

227 InfoSec assessments address:

- Cybersecurity strategy
- Cybersecurity implementation
- Attack Vector Identification
- System Vulnerabilities
- Response Planning

52% of companies victimized by successful cyber-attacks are not making any changes in their cybersecurity², primarily due to a lack of budget. This lack of budget can be attributed to the massive costs associated with cleaning up a successful data breach. The security gained through validating your cybersecurity posture is far less expensive than the cost and aggravation of cleaning up after a successful breach. Armed with extensive DoD cybersecurity experience, 227 InfoSec is your frontline asset to know if your cybersecurity posture is effective. Cost saving strategies leveraged from Defense Information System Agency (DISA) and National Institute of Standards and Technology (NIST) frameworks, puts DoD proven solutions in place to combat cybersecurity attacks.

Services offered by 227 InfoSec:

System Vulnerability Assessment
System Hardening
Penetration Testing
Employee Cybersecurity Training
Cybersecurity Strategy Planning

Network Vulnerability Assessment
NIST 800 Risk Assessment
Security Policy Assessment
IDS / EPO / HBSS Configuration

227 InfoSec recognizes that the management of cybersecurity is a complex, multifaceted undertaking that requires the involvement of the entire organization, from senior leaders to staff members. 227 InfoSec's DoD experience establishes confidence in your cybersecurity posture and pinpoints vulnerabilities before a breach.

Comprehensive Cybersecurity Assessment
